Welcome screen

Welcome!

Thank you for your interest in our study, 'Where Are The Cards?'

Here's a quick summary of what's about to happen:

1. Webcam Setup and Video Consent: First, we'll be checking that your webcam is working. Then you and your child will give your consent to participate in this research.

2. Start the Study: When you click the 'Start the game!' button, the study will begin! This study will take about 5-7 minutes in total.

Thank you so much for helping us with our science! We hope you have fun.

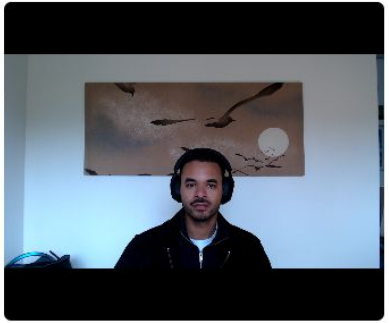
Webcam Setup, Consent

No recording during this section

Webcam setup



Microphone: C922 Pro Stream Webca

Camera: C922 Pro Stream Webca

Note: Lookit is currently only supported on recent versions of Firefox and Chrome. It doesn't work on mobile devices like phones or tablets yet!

1. Make sure you can see yourself to the left! You may need to click "Allow" so that we can access your webcam and microphone. On Firefox, make sure to also check "Remember this decision"!

Looks good!

2. Make sure your webcam settings got saved by clicking this button. Your webcam should re-appear WITHOUT you having to allow access again. (If you do see a dialogue, click "Remember this decision" or "Always allow" and try again!)

3. Make sure we'll be able to hear you! This box will be filled in once we hear a loud enough sound:

Try clapping or saying hi.

Setup tips and troubleshooting

If you're having any trouble getting your webcam set up, please feel free to call the Social Learning Lab at (650) 498-7832 and we'd be glad to help you out!

- Check your device and browser
- Camera setup instructions for Chrome
- Camera setup instructions for Firefox
- It's just not working - what else can I try?

1. Read through this consent document: (Download)

Consent to participate in research: Where Are The Cards?

Researchers led by Adani Abutto at Stanford University are running this study, "Where Are The Cards?," on Lookit.

Why we are running this study

Starting in their earliest childhood years, learners routinely experience their actions leading to unexpected outcomes. Achieving things outside of one's expectations is a curiosity-inducing, joyful learning experience; it results in surprise and can spur learners on to further explore how they did it, and what else they may be able to do in the world. We aim to investigate whether children early in development are sensitive and responsive to such experiences, and how they can be elicited reliably.

What happens during this study

This study takes about 5 minutes to complete. In this study, your child will play a simple card game! In this game, your child will learn about the cards, make some choices while playing with the cards, and then answer a few short questions. This study has been designed to be fun and appropriate for young children.

Participation is voluntary

You and your child are free to choose whether to be in this study. If you do choose to participate, it's okay to stop at any point during the session. Please do pause or stop the session if your child becomes fussy or does not want to participate!

Participation in this study is entirely optional, and you are free to exit at any time.

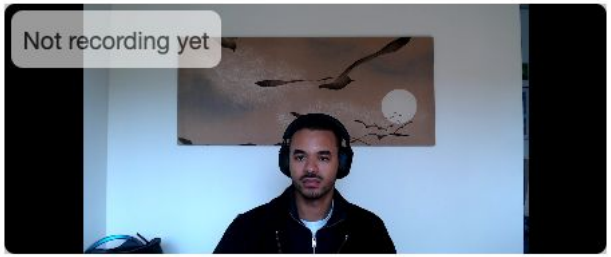
What are the risks?

There are no expected risks if you participate in the study.

What are the benefits?

There are no costs to participating. There are also no known risks associated with this study beyond those of everyday life. Although this study will not benefit your child directly, it will

2. Click to start consent recording...



3. Read the statement below *out loud* (or in ASL):

"I have read and understand the consent document. I am this child's parent or legal guardian and we both agree to participate in this study."

4. Click to stop recording

5. Play the consent video ▶ **to make sure your video was recorded. (If not, you can try again!)**

Submit

Positioning

It's time to get your child & check yourself out!

Reload webcam

1

Get comfortable

You and your child can sit in any position.

☐ **Got it!**

2

Take a few moments

Go ahead and get settled and use the webcam preview to make sure your child's whole face and torso are in view.

☐ **Got it!**

3

When you're ready

Press the 'Next' button down below if you and your child are in position and ready to go.

Exit survey / debrief

Thank you for your participation! Please provide your email for study compensation. Your email will only be used for compensation and nothing else.

★**Email**

This field is not optional.

★ **Please confirm your child's birthdate:**

We ask again just to check for typos during registration or accidental selection of a different child at the start of the study.

★ **Would you like to share your video and other data from this session with authorized users of the secure data library Databrary?**

- ○ No
- ○ Yes

Only authorized researchers will have access to information in the library. Researchers who are granted access must agree to maintain confidentiality and not use information for commercial purposes. Data sharing will lead to faster progress in research on human development and behavior. If you have any questions about the data-sharing library, please visit Databrary or email ethics@databrary.org.

★ **Use of video clips and images:**

- ○ **Private:** Video may only be viewed by authorized scientists: Lookit project staff and researchers working with Adani Abutto (sll_lookit@stanford.edu) on the study "Where Are The Cards?."
- ○ **Scientific and educational:** Video may be shared for scientific or educational purposes. For example, we might show a video clip in a talk at a scientific conference or an undergraduate class about cognitive development, or include an image or video in a scientific paper. In some circumstances, video or images may be available online, for instance as

Thank you for participating!

This research wouldn't be possible without awesome parents like you.

Some Background Information:

Children begin as universal novices; once they start taking action in the world, they start experiencing success on tasks they did not know they could succeed on (e.g., tying their shoes by themselves for the first time, or getting a "lucky draw" in a game). Such experiences are joyful and surprising. Here, we investigate how we can bring about such experiences of "self-surprise," and how they relate to learners' later exploration of their capabilities. This study will help us understand what sparks children's surprise and enhances their desire to continue learning about themselves and the world.

Additional Resources:

To learn more about this topic, you can check out some of the following works and resources:

Science, problem solving and play - Sara Baker

Compensation:

To thank you for your participation, we'll be emailing you a $5 USD Amazon gift card - this should arrive in your inbox within the next week after we confirm your consent video and check that your child is in the age range for this study (If you don't hear from us by then, feel free to reach out!). If you participate again with another child in the age range, you'll receive one gift card per child.

Questions or Concerns:

Please do not hesitate to contact Adani Abutto at aabutto@stanford.edu
